

MANUFACTURING PROCESS

At CEMPRO, we aim to provide the best quality bricks and blocks. To this end, every batch of stocks and blocks we produce has to pass a number of quality checks. This ensures that our products comply with SABS standards. Users of our products can rest assured that our bricks and blocks are of the highest quality. That is precisely why users may expect the highest quality bricks and blocks.

The main steps in the brick and block manufacturing process are shown below.

★ 01 MIXING THE RAW MATERIALS

★ 02 PRESSING AND CURING

After thorough mixing, the raw materials are compressed into the stock or building block moulds. Then they are left to cure.

★ 03 TESTING

After curing, the bricks undergo a variety of quality tests to check compliance with SABS standards regarding dimensions, squareness, strength, wetting and drying behaviour etc.
