

Product Range

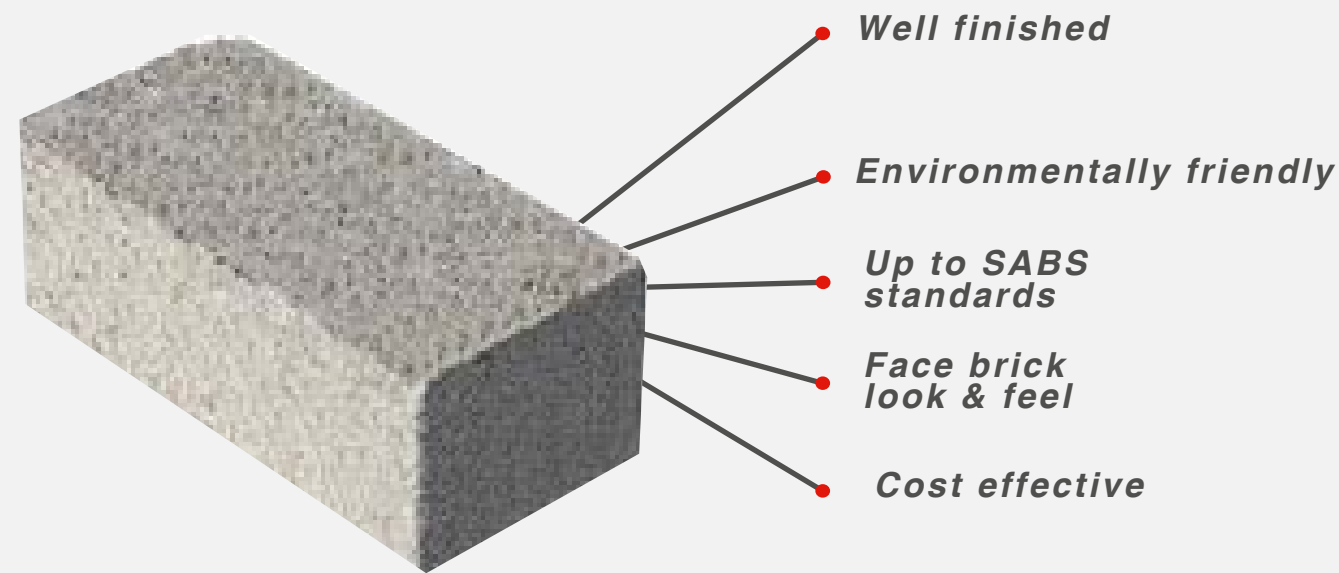

CEMPRO currently produces two main products:

The CEMPRO Stock Brick

The Cempro stock brick is a standard size brick that's mostly used to build the inside structures of homes or buildings.

The inside of the structures can then be plastered according to need.

- This brick makes the building process much cheaper due to size and cost.
- The stock brick can also be utilised as a foundation brick.
- It is very well finished and can almost be utilised as a face brick.

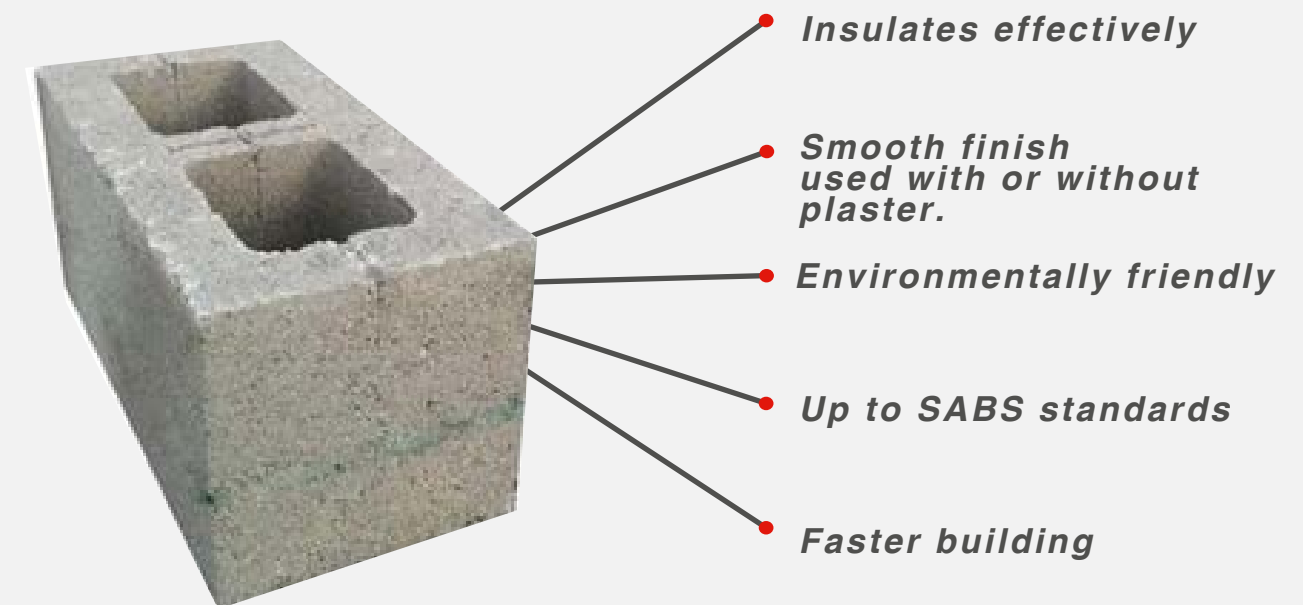

Brick size:	220 x 100 x 70 mm
Average weight:	Approx. 4 kg

The CEMPRO Building Block

The Cempro building block is used to build various structures, such as homes or buildings.

- One of the key advantages of the building block is that it effectively insulates your home and assists in regulating the temperature accordingly.
- Due to its large size, the building blocks speed up the building process.
- One of the attributes is that these blocks have a very smooth surface and can be plastered or not.

Block size:	390 x 140 x 190 mm
Average weight:	Approx. 18 kg
